

The Missing Link

- **Fragmented** ingestion across databases, files, streams, and cloud platforms creating operational complexity and delayed insights
- **Heavy reliance on custom ETL development** slowing down source onboarding and increasing costs
- **Inconsistent** change data capture framework impacting data freshness and reliability
- **Limited** pipeline governance, data lineage, and system audit visibility hindering regulatory readiness

FLOWX

FlowX moves enterprises from fragmented data ingestion to governed, real-time data integration, enabling faster access to trusted data.

Business Intelligence Through Natural Language

The Path to Impact

100% Databricks-native:

Pure compute consumption, Unity Catalog-native, zero additional SaaS licensing

Intelligent governance and lineage:

Built-in monitoring, reconciliation, lineage and audit tracking from day one

Configuration-driven automation:

Control-table-driven CDC, IUD and SCD processing with minimal manual intervention

Why Hoonartek

16 years of Data and AI experience

Built from real enterprise deployments

Databricks-native accelerators

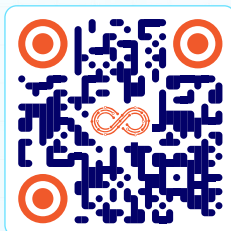

Proven outcomes in enterprises
across verticals

Success Story

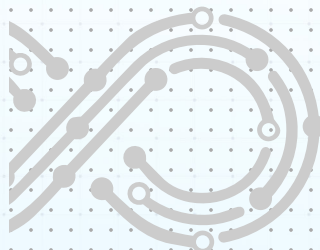

A global insurance and asset management achieved modernization of its legacy systems from Azure Synapse to a Databricks Medallion Lakehouse, with Hoonartek. The company was restricted by data fragmented across SAP, ServiceNow, Oracle, PostgreSQL, and HR systems, alongside weak PII governance and constrained scalability. Hoonartek implemented automated ingestion and FinOps controls across a Bronze > Silver > Gold architecture, utilizing Unity Catalog for RBAC/ABAC PII masking and lineage. This solution eliminated IT-dependent reporting friction, driving a 65% faster time-to-insight, 3 times faster query execution, 60% faster batch processing, and 100% automated PII coverage.
