

# VAULTX

A single control plane for end-to-end data governance and observability

## The Missing Link

- **Limited** visibility into pipeline health and data quality
- **Manual** data masking workflows creating security gaps and governance inconsistencies
- **Strained** regulatory and audit compliance operations across environments
- **Fragmented** governance controls across impacting scalability and regulatory readiness

## VAULTX

VaultX provides the trusted foundation for data and AI initiatives by ensuring sensitive data remains secure, compliant, and accessible across the enterprise.

Everything Governed, Monitored & Audit-Ready

## The Path to Impact

### Enterprise Lakehouse Platform:

Establishes a governed, enterprise-wide data foundation for secure access, trusted insights, and AI readiness

### Databricks-native Governance

**Framework:** Built natively on Unity Catalog with no external governance tooling required

### Intelligent Access Control & Data

**Protection:** Automated masking, role-based security, and policy enforcement at scale

**Data Quality & Pipeline Observability:** Provides centralized monitoring of data quality, lineage, and pipeline health to improve trust and operational reliability

**Automated Compliance & Operational Monitoring:** Real-time visibility into governance, audit readiness, and platform health

## Platform Highlights

### Databricks-native — built inside Unity Catalog.

No external governance tooling; zero ISV sprawl

### Role-based masking with AD group integration

Centralized DQ and pipeline observability out of the box

### Config-driven alerts with zero custom code

End-to-end auditability and governance visibility across all domains

## What Vaultx unlocks

**100%**

Privacy and PII Data Protection

**3X**

Improvement in Operational Efficiency

**Day 1**

Audit-Ready

## Why Hoonartek

16 years of Data and AI experience

Built from real enterprise deployments

Databricks-native accelerators

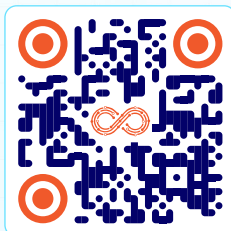

Proven outcomes in enterprises across verticals

## Success Story

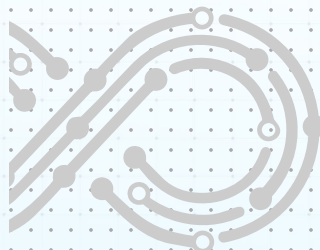

Hoonartek engineered a secure, governed Databricks Lakehouse for a leading private sector bank to unify 1.5 PB of data across 120+ siloed systems. The solution protected 2,200+ exposed PII elements with automated, DPDP-aligned privacy controls and eliminated manual reporting friction. This modernization compressed reporting cycles by 98% (shrinking data delivery from 30 hours to just 45 minutes) while achieving full production launch 9 months ahead of schedule.
